General Description

The Proto-Vest E360 is a stand alone drying system that is ideal for in-bay automatics and tunnels with a variety of line speeds. This system utilizes two (2) 30-hp blowers and three (3) air delivery bags designed to direct air around the vehicle as it passes under the equipment arch. Both of the blower/motor assemblies on the E360 are engineered for maximum efficiency and cost effectiveness to save you money, while providing a proficiently dried vehicle.

The E360's blower assembly is manufactured from high strength powder coated steel, its plenum is made from 5052-H32 aluminum, and its bag is produced from durable Proto-Duct™. All of these stringent material standards help the E360 resist corrosion and tearing within the car wash giving it extended equipment life and reduced maintenance.

(Please note that J.E. Adams recommends routine maintenance in order to maximize product life.)
